

While price is important, it's not the first question you should ask your injector, here are the 5 things we suggest you ask...

Why are these questions important? Our services are medical based, we literally have an entire step of our intake process where a doctor reviews your intake form to ensure you're medically eligible for treatment...

So you know you're in good hands in our office, your safety comes above all else.

But we're not done - we stand proudly behind the results of our work, so much that we strive to post as many before and after photos across 15 different insta accounts (including [MeeshaMagic](#), a portfolio account dedicated to our work!)

But you shouldn't just trust an injector's photos... you should trust the word of your peers - it's why we

worked our tukus off to earn over 1600 Five-Star reviews...

We didn't get here with just 1 training Course 15 years ago... every year we

sanitation measures both during, post treatment. We never re-use gloves, icepacks or (GASP) needles! We're more than happy to show you your packaged box of filler, peel or Botox before using it...

EXPERIENCE & SUPPORT	PRODUCT SOURCE	ACCOLADES & REVIEWS	SANITATION	CONTINUED EDUCATION
How long have you been Injecting? Do you have immediate access to help? <i>We've got over 50 years combined experience and a beautiful staff of 7 in case you were wondering!</i>	Where do you buy your Product from? <i>We get our products direct from US Manufacturers, if you can't read the box of the product you're about to receive... RUN!</i>	Do you have any testimonials or before and after photos? <i>We could tell you we're really good because we're in the top 1% of the country, or you could trust the 1600+ five star reviews we've got on Google, Facebook, Realself and Yelp.</i>	Are you using new gloves, new ice packs and new needles? <i>We don't have to elaborate on this one right? Re-using gloves or ice is gross... re-using needles is illegal.</i>	How often do you continue your education? <i>Working under a National Trainer (for both Allergan and Galderma) every staff member must complete 2 courses per year. Yay more knowledge!</i>

Speaking of, something people forget to ask their non-meesha injector is - where did you get your product? If it's not made in the USA, RUN. Counterfeit Botox and filler doesn't work, doesn't last, and

attend in person and virtual conferences to further push ourselves and learn the latest pearls of knowledge and tricks of the trade (you should see what we learned about under eye filler last year!).

You know OUR skill sets are sharp but what about our OFFICE? YES!

Even before sanitation was 'in' thanks to Covid, we were going above and beyond to keep our office space spotless. Our nurses are trained in

isn't worth the money!

The final thing we're proud of is team support. We'll never claim to be perfect, sometimes we need a second opinion, or a helping hand and that why we think having a team of providers is important!

We Hope you feel comfortable in our treatment chair, but if you ever have a question, ask us... after all, and educated client is a happy client!
