

Jackie Walsh (RN) used to have amazing skin! But after the birth of her first child - cystic and non-cystic acne made their homes on Jackie's chin / Jaw. In the late 2000s she got her first job in the Aesthetic field and knew that if she was going to be trusted by her clients, she needed to put her best face forward (literally).

It may shock you to find out, that Jackie has never had filler. Not because she doesn't love the idea of filler, but she's not experiencing volume loss yet! Since she notices her skin concerns most she wants to target those before nitpicking other areas! She says when she get her skin conditions under control before properly assessing her face to determine which fillers would be best for her.

This practice of 'no filler until I'm acne free' is not common, but it's what's giving her the motivation to stick to skin routines!

She first tried over the counter acne medications and quickly found they were making her skin worse and causing her to dry out.

She's grateful for Injector / Dermatologist Christine for setting her up with the medication Spironolactone, but also knew she'd want a peel.

It was then she decided to put her self on our Estheticians schedule and get the help she needed.

The estheticians took one look at her and knew immediately that she needed quite a few chemical peels to get the job done.

The team started her off light with a Skin Medical Retinol peel to ensure her skin could stand 'the strong stuff' and when she had no major

reaction to the Retinol, they moved forward.

The Estheticians proceeded to reach for the top shelf of chemical peels and they introduced her to the PCA MD peel. It's a high percent of TCA (Trichloroacetic acid) and is known to leave friends faces in shambles as the scarred / dead skin sheds off to reveal brand new Smooth skin. Good news, it comes with a Post Care Kit!

Being in the industry, she knew that after her skin healed, and she sat tight for a month, she was going to want a second peel. After all the skin is your largest and most complex organ and it takes a bit of TLC to get it where you want it.

She met again with our estheticians who recommended a different peel — the PCA MD which was great for tone and texture, but now she wanted to target

Acne Scars. So she opted for 'The Perfect Peel'

This peel was newer to our office at the time so she stood as a guinea pig, but after seeing her results we knew we had to bring it on ASAP!

These peels not only helped Jackie with her acne scars (And active break outs) but they also helped her with her static lines! Any good meesha client knows Static lines are the ones that are trickier to treat with Botox and are better treated with peels and microneedling.

These lines can be brought on by sleeping on your side! Fortunately a side affect of Jackie's skin care journey was erasing those!

Jackie is loving her new skin and looks forward to continuing her journey!

Stay tuned to Social Media to see when Injector Jackie gets her first round of filler!
