"The CoolPeel greatly improved my complexion, minimized my pores and fine lines and gave me an overall refreshed look. I am very pleased with my results and I have even gone without makeup!"

- Ashley, 32

"By Day 2 any redness was gone and my skin looked like I had hit refresh. It was more even toned, softer and my pores significantly smaller - I can't wait for my next CoolPeel!"

- Jill, 41

"I couldn't believe how fast the treatment was and how happy I was once I started to see the results. Totally worth one day of looking a little pink!"

- Sean, 39

HOW DOES THE COOLPEEL™ WORK?

A CoolPeel laser treatment can only be done using the Tetra CO2 laser. Only the Tetra has the precision and control to deliver energy at the right depth and speed for superficial skin resurfacing results without the lingering heat that would traditionally damage the surrounding skin. This lack of unnecessary heat is where it gets its name and why you get an immediate aesthetic effect with minimal downtime.

WHO IS A CANDIDATE FOR COOLPEEL?

You are a good candidate for a CoolPeel laser treatment if you are looking to reduce the appearance of fine lines and sun damage, minimize pores and improve skin texture. Skin will look healthier and younger.

HOW LONG DOES A COOLPEEL TAKE?

A full-face CoolPeel laser peel can take anywhere from 5-15 minutes.

IS ANESTHESIA OR NUMBING REQUIRED?

While there is no need for anesthesia or localized numbing, your provider may use a numbing cream for additional comfort.

WHAT IS MY RECOVERY TIME?

One of the main benefits of a CoolPeel, is that there is minimal downtime. You should expect to be a little red, as if you have a sunburn, for a day or two, but nothing should prevent you from returning to your normal daily activities. Your skin may feel dry and scaly as it heals so it is important to keep the skin hydrated.

WHEN CAN I RETURN TO MY SKINCARE ROUTINE?

After your CoolPeel treatment, it is important to keep your skin hydrated and there may be certain products you should avoid. Talk to your provider about the best post-treatment care and when you can return to your daily skincare regimen.
