

**K**elsey is no stranger to SPF, in fact it's common to hear Chris squawking down the hall 'KELSEY, ARE YOU WEARING SPF' - but it wasn't always that way! Come with us on a Journey to discover how / when Kelsey went from Sun Worshipper to 'Never leaves the house without two kinds of SPF'

Back in 2014 Kelsey graduated from Metro Beauty Academy, where Members of Team Meesha had been visiting to give lectures forever! She knew she wanted to work at Meesha and put a 'bug' in our esthetician manager Liz' ear about her goals.

Liz was our primary esthetician at the time, and wasn't 100% sure she was ready to 'stop' seeing patients and start being a manager, but she saw the potential in Kelsey and took

a leap of faith and introduced her to our clients

SHE WAS A HIT, her bubbly personality was addicting and her passion for skin goals was clear to everyone.

What made Kelsey stand out was that she went through the process of revealing her skin herself! Back in her senior year she SWORE by the tanning salon, day after day she would bake in the UV light - because she thought being tan was 'hot' - didn't we all.

But then when she started her Career as an esthetician she realized that healthy skin was 'hot' and she began a consistent medical grade skin care regimen including Hydroquinone, and also took part in services such as Chemical Peels, microneedling AND laser! After all, how could she treat patients and have hyperpigmentation issues herself!

The years have flown by and Kelsey has continued to protect her skin, her current favorite SPF is \_\_ and she's sure to cycle through a variety products to find what protects her best and helps prevent breakouts!

Kelsey has been thriving at Meesha ever since, when she's not swiping through Tinder matches in the break room / eating saltines - you can find

her rolling around and cuddling with her dog Doug who's become an instagram staple - you can see a lot of him

Recently Kelsey got trained on the BBL / Moxi Device which is AMAZING at bringing hyperpigmentation to the surface and effectively erasing it! Sure there's a dash of downtime, but isn't clean and clear skin worth it?
