

SOLO EXTRACTIONS

Description and Consent Form

Extraction is a corrective technique that gently and safely removes blackheads, drains inflamed acne impactions and releases trapped ingrown hairs when possible.

Extractions are best performed when the skin has been "prepped" by a pore-penetrating light skin peel or a clinical facial with an enzyme peel with steam. These exfoliating treatments help relax pore openings, digest dead skin cells and soften oil build-up.

Dramatic clearing is achieved when anti-bacterial home care exfoliants are used consistently as directed. Using active home care faithfully makes extractions less uncomfortable and easier to perform with minimal irritation. Inconsistent home care and random application of active products won't soften pore openings, improve skin tone, refine skin texture or prevent pore clogging and breakouts.

Side effects include mild temporary tenderness, redness, swelling, sensitivity, flaking and small scabs. Superficial dark spots can occur when extracting old or deep lesions are extracted and are normal and temporary. Superficial blemishes fade faster when sun protection, acne products, lighteners and other homecare products are used exactly as directed.

Safety: We use sterile stainless steel extractors. Drapes, gloves, sponges and swabs are disposable.

We attempt to remove larger lesions first and cannot guarantee all pimples, blackheads and ingrowns can be extracted during this procedure. We cannot guarantee any lesion will not "recur" at a later date

I have read this form carefully and I understand the extraction process, amount to be extracted and possible side effects. I agree to all conditions and costs. Initial here: _____ (mandatory).

I agree to avoid direct sun and not exercise for 24 hours, to use sun protection faithfully and to wait 24 hours before using active acne products, scrubs, lighteners, AHA and retinol products.
